

CAPSTONE PROJECT REQUIREMENTS - PLAYWRIGHT

1. Project Architecture Overview

The capstone project requires participants to architect a dual-project framework structure within a single unified multi-project layout. Rather than writing scattered test scripts, candidates will implement an enterprise-grade workspace that enforces structural modularity, clear separation of concerns, and robust configuration layers.

2. Project Objectives

1. Separate GitHub repository
 2. Daily commits and progress updates
 3. Allure and HTML reporting
 4. Minimum 8 services/modules
 5. Minimum 120 automated test cases
 6. Screenshot and trace capture
 7. Reusable Page Object Model structure
-

3. Technology Stack:

- Playwright - for automation
 - JavaScript - programming language
 - [Node.js](#) - Runtime environment
 - GitHub - Version control
 - Allure - Reports
-

4. Expected Outcome:

The project will demonstrate Playwright automation concepts including reusable framework architecture, robust locators, reporting, API testing, screenshots, recordings and maintainable automation workflows.
